PROFESSIONAL SUMMARY

Software engineer with 5+ years of professional experience at IBM, Infor, and Accenture, developing, enhancing, and supporting enterprise applications. Experience spans C#/.NET backend services, React interfaces, Java/Spring Boot, SQL queries and scripts, stored procedures, and REST API integrations for ERP, finance, and reporting systems. Applies object-oriented design principles, Factory and Singleton patterns, and separation of business logic to modernize legacy applications. Contributes to solution design, code reviews, automated backend testing, CI/CD, deployment validation, and production incident resolution. Collaborates with clients, business stakeholders, architects, developers, and QA teams across requirements, implementation, testing, and technical documentation. Uses AI-assisted tools for development and code validation. Additional experience includes Power BI administration, data warehousing, EPM, ETL pipelines, and reporting automation.

RELEVANT SKILLS

Languages and frameworks: C#, .NET, Java, Java/J2EE, Spring Boot, Hibernate, JavaScript (ES6+), TypeScript, React.js, Node.js, Python, PowerShell, Groovy, VBA, VB6, C++, jQuery, JSP, HTML, CSS.

Databases: SQL, Oracle SQL, SQL Server, Azure SQL, PostgreSQL, MySQL, stored procedures, views, database and table design.

Architecture and integration: Microservices, layered architecture, event-driven architecture, REST APIs, REST controllers, SOAP, GraphQL, JSON processing, XML, XML DSL, Apache Camel, Kafka, MQ, RabbitMQ, SFTP, ERP integrations, Factory and Singleton design patterns, refactoring legacy applications.

Testing and enterprise support: Agile SDLC, requirements analysis, solution design, unit testing, integration testing, test plans, automated backend testing, SIT, UAT, production support, incident investigation, root cause analysis, pod and application monitoring, JVM heap and memory configuration, diagnostic logging, tier-1 and tier-2 support.

DevOps and release delivery: Jenkins, Docker, TeamCity, Azure DevOps, GitHub Actions, Bitbucket pipelines, Git, Bitbucket, SVN, Maven, Gradle, CI/CD, deployment validation, versioning, rollback support, release management.

AI and developer productivity: ChatGPT, GitHub Copilot, OpenAI APIs, generative AI, prompt engineering, agentic AI workflows, LLM integration, AI-assisted code generation, test generation, debugging, documentation, and code validation.

Tools and collaboration: Splunk, SonarQube, Swagger, Postman, IntelliJ IDEA, VS Code, JRebel, Jira, Confluence, technical manuals, installation guides, code reviews, client communication, cross-functional delivery, user onboarding, Office 365 and VPN troubleshooting.

Cloud and application platforms: AWS (Glue, EC2, S3, Lambda, RDS, EKS), Azure, Oracle Cloud Infrastructure, Red Hat OpenShift, IBM WebSphere Application Server, WebLogic, Oracle Sales Cloud, Oracle CX Cloud.

Security: Authentication, authorization, JWT, OAuth, encryption, secure coding, user restrictions, data compliance workflows, enterprise security validation.

Business intelligence and reporting: Power BI administration, gateway management, gateway connections, connection permissions, access management, capacity management, client and management reporting, Tenable data reporting, Oracle BI, Oracle Analytics, Infor LBI reporting services, SAP Crystal Reports, parameterized PDF report exports, automated report generation.

Data warehousing and EPM: Infor DWD, Infor EPM, business modeling, OLAP cubes, cube data imports, XML data imports, integration schedules, backup imports, ETL pipelines, data engineering, data transformation, data validation, SSIS, MSDB, Oracle Data Integrator.

PROFESSIONAL EXPERIENCE

Application Developer

IBM | Sep 2025 - Sep 2026

- Developed and supported Java Spring Boot microservices and REST APIs connecting client-facing applications, databases, and downstream enterprise systems. Used XML DSL and Hibernate in application development.
- Investigated production incidents using OpenShift logs, application logs, and Splunk dashboards to identify root causes and restore service availability.
- Supported enterprise applications on Red Hat OpenShift, monitoring pod health, validating deployments, and troubleshooting runtime and deployment issues.
- Worked with business stakeholders, architects, QA teams, and developers on requirements, SIT/UAT, defect resolution, and CI/CD releases.
- Applied authentication, authorization, encryption, and secure coding practices; validated AI-generated code against enterprise quality and security standards.
- Automated report generation and conversion with Python to prepare data for AI-assisted automation and more rigorous data validation.
- Used Tenable data in Power BI to support client-side reporting and reporting to management.

Software Engineer

Infor | Philippines | Sep 2020 - Jul 2023

- Built REST APIs and backend services using C# and Java for ERP integrations and finance and reporting tools; used Apache Camel, XML DSL, JSON processing, and Hibernate. Developed React dashboards for EPM datasets.
- Developed business modeling applications using C# and React.js, with Git for version control, resolving defects and delivering enhancements. Contributed to an automation tool intended to identify potential bugs introduced by code changes.
- Supported Oracle stored procedures, views, and backend microservices in WebLogic; developed JWT-authenticated services and supported Spring Boot upgrades for AWS and WebLogic compatibility.
- Used GraphQL with Java in Infor development projects.
- Refactored legacy code using Factory and Singleton patterns, separated business logic into services with a single responsibility, and replaced servlets with REST controllers.
- Reviewed colleagues' code and unit tests during development review and pretesting; ran and extended automated backend tests.
- Automated deployments using Jenkins, Docker, and Bitbucket pipelines; improved versioning and rollback reliability and collaborated on multi-region rollouts.
- Coordinated deployments of new software, feature updates, and fixes; tested and deployed scalable, highly available software products.
- Executed integration imports, validated results, and participated in architecture, design, and implementation.
- Resolved defects and enhanced DWD data warehouse applications using ETL, SQL scripts, SSIS, MSDB, VB6, PowerShell, and SVN.
- Provided guidance on process improvements and established policies; built databases and table structures for web applications.
- Created project infrastructure and builds using Jenkins; used PowerShell for administration and configuration, including SQL wrapper handling and registry cleanup.
- Worked with developers and testers to deliver functionality, scalability, and performance requirements; modernized legacy code and wrote and executed test plans, debugging scripts, and testing tools.

- Developed and supported server-based LBI Reporting Services using Java/J2EE, JSP, JavaScript, HTML, CSS, XML, SQL, Apache, and IBM WebSphere Application Server; resolved bugs, delivered enhancements, and worked directly with clients when needed.
- Resolved SFTP connection resets during report broadcasts by adding SFTP handling code and dynamic connection timeout functionality, with related CSS, HTML, and JavaScript changes.
- Updated three classes supporting integration import schedules to trigger notifications for file changes and uploads.
- Implemented business modeling backup file imports and created a class to import XML data into OLAP cubes.
- Added dedicated logging classes for DataAccessContainer operations and BOController actions.
- Improved backend automatic test logging with additional parameters and execution time tracking for functions and classes.
- Created ETL pipelines using SSIS, PowerShell, and Python to transfer S3 data into cloud data warehouse pipelines; managed Oracle SQL, SQL Server, and Azure SQL integrations.
- Used AWS Glue in Infor data integration and data warehousing work, alongside Amazon S3 and ETL pipelines.
- Modernized legacy code and contributed to architecture, design, and implementation of Visual Basic backend features.
- Designed and implemented custom CMS solutions for client requirements, improving efficiency and user engagement; integrated third-party tools and components.
- Implemented parameterized PDF exports from SAP Crystal Reports and updated HTML, CSS, XML, and JavaScript interfaces for the new functionality.
- Updated installation guides and assessed Java 11, Java 15, Spring Boot, and RAS service pack levels for future upgrades.
- Documented software development methods in technical manuals for IT personnel and future projects.
- Created scripts to export report users and custom group users; investigated data source failures during testing.
- Administered Power BI gateway connections, connection permissions, and capacities for client-side requirements.
- Automated BI reporting for secure virtual server environments and supported data engineering requirements.
- Improved DEPMAPPS cube captions with meaningful names for better usability.
- Delivered data engineering work based on client business needs.
- Assisted with user onboarding and configured systems for optimal performance.
- Provided tier-1 and tier-2 support across cloud and on-premises systems; diagnosed email, Office 365, VPN, and hardware issues.

Associate Software Engineer

Accenture | Remote / Philippines | Feb 2019 - Jul 2020

- Developed Oracle Sales Cloud integrations using Java, Groovy, SOAP, and REST APIs for business and compliance requirements. Used XML DSL and Hibernate in development work.
- Implemented user restrictions through scripting, used REST APIs to retrieve backup data, and automated tasks with Python for banking and insurance client workflows.
- Designed ETL and database automation using Oracle Data Integrator, Azure pipelines, and scheduled jobs; built JavaScript and jQuery UI enhancements.
- Supported client requirements using Oracle BI, Oracle Analytics, and Oracle Sales Cloud, including reporting, bulk data loads, and artifact generation.
- Automated testing workflows using J2EE, reducing errors by 45%.
- Improved data integrity by 60% via Groovy scripting for Oracle CX customizations.
- Developed REST and SOAP APIs for data integration and artifact generation.

Project and Automation Intern

Accenture | May 2018 - Jul 2018

- Built report generation and email scheduling tools using C#, VBA, and SQL Server; modernized legacy C++ reporting systems with .NET capabilities. Used XML DSL and Hibernate during the internship.
- Created data transformation routines with minimal supervision, reducing manual reporting time by 40%.

EDUCATION

Southern Alberta Institute of Technology | Diploma in Software Development | Sep 2023 - Apr 2025

Adamson University | Bachelor of Science in Computer Engineering | Jul 2012 - Jun 2018

CERTIFICATIONS AND CONTINUOUS LEARNING

IBM Generative & Agentic AI Foundation; AWS Partner Generative AI Essentials; IBM Cloud Computing Fundamentals; IBM Web Development Fundamentals; IBM Enterprise Design Thinking Practitioner; IBM Garage Essentials; Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate; ServiceNow Micro-Certification in Flow Designer; HackerRank Python (Basic) and Java (Basic).

Completed internal Accenture learning in security, Agile delivery, Oracle CX Cloud, and automation tools. Independently studied Kafka, GCP, and WebSocket technologies; contributed to open source and internal innovation projects.
