PROFESSIONAL SUMMARY

Software engineer with 5+ years of experience spanning application development, data engineering, enterprise integrations, and BI at IBM, Infor, and Accenture. Builds Java/Spring Boot and C#/.NET services, React applications, and ETL pipelines. Hands-on work includes Oracle SQL/PLSQL performance tuning, data warehouse enhancements, OLAP imports, AWS serverless workflows, and legacy application modernization. Contributes across solution design, implementation, code reviews, testing, CI/CD, and production support. Works directly with clients, business stakeholders, architects, developers, and QA to translate requirements into working software and reliable data workflows.

TECHNICAL SKILLS

Backend and languages: Java, Spring Boot, C#/.NET, Hibernate, Python, Groovy, PowerShell, VB6, VBA

Frontend: React, Angular, TypeScript, JavaScript, JSP, jQuery, HTML, CSS

Data engineering: ETL pipelines, SSIS, Oracle Data Integrator, MSDB, data imports, transformation and validation, OLAP cubes

Databases: Oracle SQL/PLSQL, SQL Server, Azure SQL, PostgreSQL, MySQL, stored procedures, views, query tuning

BI and reporting: Infor DWD, Infor EPM, Lawson BI, Oracle BI and Analytics, Power BI gateways, SAP Crystal Reports

APIs and integration: REST, SOAP, GraphQL, Apache Camel, XML DSL, JSON, XML, Kafka, MQ, SFTP

Cloud and delivery: AWS Lambda, Step Functions, S3, OpenShift, WebLogic, WebSphere, Docker, Jenkins, Bitbucket pipelines, Git, SVN

Testing and diagnostics: Postman, unit and integration testing, SIT/UAT, test plans, Splunk, diagnostic logging, JVM heap and memory configuration

AI development tools: Claude, GitHub Copilot, OpenAI APIs; development assistance, code review, debugging, and code validation

PROFESSIONAL EXPERIENCE

Application Developer Sep 2025 - Sep 2026

IBM Canada Ltd.

- Developed and supported Java Spring Boot microservices and REST APIs connecting client-facing applications, databases, and downstream enterprise systems; worked with XML DSL and Hibernate.
- Tested JSON/XML API requests and responses in Postman; collaborated with QA on SIT/UAT, defect resolution, and deployment validation.
- Investigated production incidents using Splunk dashboards, OpenShift logs, and application logs to identify root causes and restore service availability.
- Supported OpenShift application operations through pod health checks, restarts, controlled stop/start during patching, deployment checks, and JVM heap/container memory adjustments.
- Applied authentication, authorization, encryption, and secure coding practices; participated in vulnerability checks, dependency reviews, and enterprise security validation.
- Automated report generation and conversion using Python to prepare data for reporting, AI-assisted automation, and data validation.
- Used Tenable data in Power BI for client and management reporting; worked with stakeholders to address reporting requirements.
- Participated in migration activities from on-premises environments to AWS and worked with architects, developers, and QA on requirements and releases.

- Used AI-assisted development and review tools, including Claude, and validated generated changes against enterprise quality and security standards.

Software Engineer Sep 2020 - Jul 2023

Infor | Philippines

Worked concurrently on DWD, Business Modeling, and Lawson BI, delivering application features, data engineering enhancements, and reporting platform fixes.

ETL pipelines and data warehouse development

- Created and maintained ETL pipelines using SSIS, PowerShell, and Python to transfer enterprise data, including Amazon S3 data, into reporting and cloud data warehouse workflows.
- Resolved defects and enhanced DWD data warehouse applications using SQL scripts, SSIS, MSDB, VB6, PowerShell, and SVN.
- Developed and adjusted Oracle SQL/PLSQL stored procedures and views, improving query performance and supporting application data processing.
- Worked with Oracle SQL, SQL Server, and Azure SQL integrations; built databases and table structures for application requirements.
- Executed integration imports, validated results, and investigated data load and data source failures during testing.
- Implemented business modeling backup file imports and created XML data import functionality for OLAP cubes.
- Updated three classes supporting integration import schedules to trigger notifications for file changes and uploads.

Backend services and application modernization

- Built REST APIs and backend services using Java and C# for ERP integrations, finance, and reporting tools; used Apache Camel, XML DSL, JSON processing, and Hibernate.
- Developed business modeling applications using C# and React, built dashboards for EPM datasets, and delivered JavaScript, HTML, and CSS enhancements.
- Upgraded legacy Java code from Java 8 to Java 17 and replaced servlet-based endpoints with Spring Boot REST controllers.
- Refactored legacy code using Factory and Singleton patterns and separated business logic into services with a single responsibility.
- Supported backend services in WebLogic, developed JWT-authenticated services, and addressed Spring Boot compatibility with AWS and WebLogic; used GraphQL with Java.
- Developed serverless functions and application workflows using AWS Lambda, TypeScript, and Step Functions.
- Implemented custom CMS features and integrated third-party tools and components to address client requirements.

Testing and release engineering

- Reviewed colleagues' code and unit tests during development review and pretesting; ran and extended automated backend tests and contributed to a tool for identifying potential bugs introduced by code changes.
- Added logging for DataAccessContainer operations and BOController actions; expanded automatic test logs with parameters and execution-time tracking for functions and classes.
- Automated deployments using Jenkins, Docker, and Bitbucket pipelines; improved versioning and rollback workflows and collaborated on multi-region rollouts.
- Created Jenkins project infrastructure and builds; used PowerShell for administration, configuration, SQL wrapper handling, and registry cleanup.
- Coordinated feature and fix deployments with developers, testers, and clients; participated in architecture and design, wrote test plans, and developed debugging scripts and testing tools.

BI reporting platforms and reliability

- Developed and supported server-based Lawson BI Reporting Services using Java/J2EE, JSP, JavaScript, HTML, CSS, XML, SQL, Apache, and IBM WebSphere Application Server.
- Resolved SFTP connection resets during report broadcasts by adding connection handling and configurable timeouts, with related interface changes.
- Implemented parameterized PDF exports from SAP Crystal Reports and updated HTML, CSS, XML, and JavaScript interfaces for the new functionality.
- Created scripts to export report users and custom group users; investigated data source failures during testing.
- Administered Power BI gateway connections, connection permissions, and capacities for client reporting requirements.
- Automated BI reporting in secure virtual server environments and improved DEPMAPPS cube captions with meaningful names for users.
- Updated installation guides and technical manuals; assessed Java 11, Java 15, Spring Boot, and RAS service pack levels for future upgrades.
- Worked directly with clients on reporting defects and enhancements, supported user onboarding, and troubleshot cloud and on-premises systems.

Associate Software Engineer Feb 2019 - Jul 2020

Accenture | Philippines

- Developed Oracle Sales Cloud integrations using Java, Groovy, REST, and SOAP APIs for business and compliance requirements.
- Designed ETL and database automation using Oracle Data Integrator, Azure pipelines, and scheduled jobs.
- Built Oracle BI and Oracle Analytics reports and supported bulk data loads, reporting requirements, and artifact generation.
- Implemented scripted user restrictions, retrieved backup data through REST APIs, and automated tasks with Python for banking and insurance client workflows.
- Delivered JavaScript and jQuery interface enhancements and worked with client teams to resolve application and integration issues.

Project and Automation Intern May 2018 - Jul 2018

Accenture

- Built report generation and email scheduling tools using C#, VBA, and SQL Server to automate internal reporting tasks.
- Created data transformation routines and automated repeatable reporting steps with minimal supervision.

EDUCATION

Diploma in Software Development | Southern Alberta Institute of Technology
Sep 2023 - Apr 2025

Bachelor of Science in Computer Engineering | Adamson University
Jul 2012 - Jun 2018

CERTIFICATIONS AND TRAINING

IBM Generative & Agentic AI Foundations | Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate

AWS Partner Generative AI Essentials | IBM Cloud Computing Fundamentals

ServiceNow Micro-Certification in Flow Designer | HackerRank Python Basic and Java Basic
